

W03-P1: test-db.js can retrieve 5 data of category_xx tables

The screenshot shows a VS Code editor with three files open: `app.js`, `test-db.js`, and `test.json`. The `test-db.js` file contains a database connection and a query to retrieve data from the `category_88` table. The `test.json` file contains an array of five objects representing the retrieved data. The terminal output at the bottom shows the results of the query, which are the same as the data in `test.json`.

```
const db = require('./database');
const testDB = async () => {
  try {
    let results = await db.query('select
      * from category_88');
    console.log('results', JSON.stringify(
      results.rows));
  } catch(error){
    console.log(error);
  }
}
testDB();
module.exports = testDB;
```
